MEETING PLACE

MADEIRA – ECOLOGIC EXPERT ISLAND

MAIN TARGET MARKETS

Since a few years Madeira has invested in various renewable energies, namely in solar, wind, hydroelectric power plants and in their expansions. The energy produced by the plants has two fundamental advantages, namely that it is renewable and non-polluting.

The most current project for sustainable energy in Madeira consists of the Extension of Hydroelectric Use of Calheta and has as its specific strategic objectives:

- ✓ Improve security of energy supply;
- ✓ Reduce dependence on the outside;
- ✓ Reduce the energy intensity in the Gross Domestic Product;
- ✓ Reduce carbon dioxide emissions.

Madeira Island is evergreen and pure, a good example for the world.
